

QUO VADIS

Introduction

Quo Vadis, one of the worlds leading Lighting System Integrators and Technical Service Providers, creates the most technically advanced control systems available, by integrating commercial lighting control and home automation products from the worlds leading manufacturers.

Working in full co-operation with all leading Architects, Mechanical & Electrical Consultants, Interior Designers and Lighting Designers, Quo Vadis can specify, supply, maintain and technically support the most comprehensive lighting systems available.

Solutions are all application specific, ensuring that end users get elegant and convenient control of both their working and living environments. Whether it be to control lighting, security or complete home automation systems, Quo Vadis have the answers.

Harnessing cutting edge technology offers customers the flexibility of using simple wall panels, touch-screen panels or even the internet to monitor and control residential and commercial premises, from home or abroad.

Quo Vadis complements the quality of the products used in each application, with the quality of its own dedicated after-sales technical services, with on-site support maintained by our team of highly skilled technicians.

Quo Vadis, for your total lighting solutions.

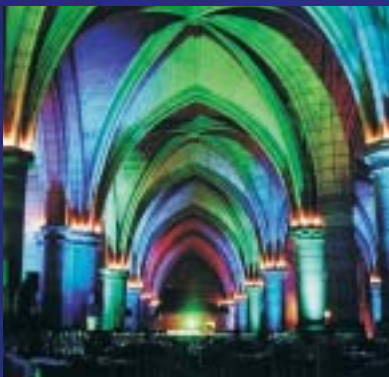

TOTAL LIGHTING SOLUTIONS

Heritage (Facade)

Consideration must also be given to the function of each area within the building, such that delicate combinations of natural daylight with accent lighting and electronic display lighting, balances the light patterns within each area to ensure an appropriate lighting contrast between exhibits and general circulation spaces. These criteria are fundamentally important to the overall success of the lighting throughout the entire building.

When darkness descends, it is also a fact that surroundings dramatically change, leaving only the buildings or monuments with adequately illuminated facades visible. The art of facade lighting is no more prevalent than when illuminating buildings of historical value. Implementing sophisticated floodlighting systems which automatically illuminate buildings, trees and works of art, as natural daylight fades, helps create breathtaking scenes. Heritage lighting requires control systems which seamlessly integrate in order to enhance the atmosphere of the original interior lighting as well as emphasizing the stylistic elements of the buildings exterior.

When integrating lighting controls for historical applications, primary consideration needs to be given to the effective design of the lighting, to ensure that it is not only capable of just illuminating paintings, sculptures or exhibits but that it is also capable of highlighting both the interior and exterior of the building such that the architecture is also visually appealing to the visitor.
