

QUO VADIS

Introduction

Quo Vadis, one of the worlds leading Lighting System Integrators and Technical Service Providers, creates the most technically advanced control systems available, by integrating commercial lighting control and home automation products from the worlds leading manufacturers.

Working in full co-operation with all leading Architects, Mechanical & Electrical Consultants, Interior Designers and Lighting Designers, Quo Vadis can specify, supply, maintain and technically support the most comprehensive lighting systems available.

Solutions are all application specific, ensuring that end users get elegant and convenient control of both their working and living environments. Whether it be to control lighting, security or complete home automation systems, Quo Vadis have the answers.

Harnessing cutting edge technology offers customers the flexibility of using simple wall panels, touch-screen panels or even the internet to monitor and control residential and commercial premises, from home or abroad.

Quo Vadis complements the quality of the products used in each application, with the quality of its own dedicated after-sales technical services, with on-site support maintained by our team of highly skilled technicians.

Quo Vadis, for your total lighting solutions.

Offices

With the wind of change constantly sweeping through our daily lives, the office environment has undergone a functional, organisational and technological revolution. In the interests of efficiency, office personnel are expected to be highly flexible and communication orientated, so too must be the lighting control technology implemented throughout the office environment

There are many varieties of office design which cover private offices, team or group offices and open plan offices, all of which have differing lighting design requirements and different lighting control needs.

Smaller executive offices tend to be in keeping with the corporate style of the company, but are nevertheless more personalised. They implement pre-set lighting control systems with a mixture of energy efficient luminaries, high quality desktop lamps, stand-alone up-lighters and wall wash down-lighters.

Larger corporate offices implement energy efficient lighting control systems with intelligent fluorescent luminaries, complete with digital high frequency electronic control gear and inbuilt movement detectors /daylight sensors, all communicating with a central building management system. This ultimately optimises energy consumption and relays status feed-back of the lamp and ballasts operational characteristics to the buildings engineering department, ensuring effective lighting maintenance. Whatever the application, Quo Vadis have the solutions.
